Part 3
4/28/2026

This project is an Air Ticket Reservation System web application built using PHP, MySQL, HTML, and CSS. The application uses the database tables created in Part 2 and is organized into public pages, customer pages, and airline staff pages.

1. db.php

Contains the database connection code used by the application to connect to the MySQL database.

2. index.php

Main home page shown when the user is not logged in. Provides links to public search, customer login, airline staff login, customer registration, and airline staff registration.

3. login_customer.php

Customer login form page. Collects customer email and password.

4. login_auth_customer.php

Processes customer login form submission. Verifies the customer credentials against the Customer table and starts a session if login is successful.

5. login_staff.php

Airline staff login form page. Collects username and password.

6. login_auth_staff.php

Processes airline staff login form submission. Verifies the staff credentials against the Airline_Staff table and starts a session if login is successful.

7. logout.php

Logs the current user out by destroying the session and returning to the home page.

8. register_customer.php

Customer registration page. Collects new customer information and inserts a new record into the Customer table.

9. register_staff.php

Airline staff registration page. Collects new staff information and inserts a new record into the Airline_Staff table. Also inserts staff phone information into the Staff_Phone table.

10. customer_home.php

Customer home page shown after successful customer login. Provides links to customer-specific use cases.

11. customer_search.php

Allows users to search future flights by departure airport, arrival airport, and date.

12. customer_future_flights.php

Shows future flights for the currently logged-in customer based on tickets purchased.

13. customer_past_flights.php

Shows past flights for the currently logged-in customer based on tickets purchased.

14. customer_purchase.php

Allows a logged-in customer to purchase a ticket for a flight if seats are available.

15. customer_rate.php

Allows a logged-in customer to rate and comment on a past flight.

16. staff_home.php

Airline staff home page shown after successful staff login. Provides links to airline-staff-specific use cases.

17. staff_view_flights.php

Shows flights belonging to the airline of the currently logged-in airline staff member.

18. staff_add_airplane.php

Allows airline staff to add a new airplane for their airline.

19. staff_create_flight.php

Allows airline staff to create a new flight for their airline.

20. staff_change_status.php

Allows airline staff to update the status of a flight, such as on-time or delayed.

21. staff_view_customers.php

Allows airline staff to view the customers booked on a selected flight.

22. style.css

Contains the styling for the web application pages.

23. part2_create_tables.sql

SQL file containing all CREATE TABLE statements from Part 2.

24. part2_insert_data.sql

SQL file containing sample INSERT statements from Part 2.

25. part2_queries.sql

SQL file containing required Part 2 queries and their outputs.

26. part1_er_diagram.png

Image file containing the ER diagram from Part 1.

27. part2_relational_schema.pdf

PDF file containing the relational schema diagram from Part 2.
