Introduction to Databases CS-UY 3083

Databases Project – Part 3 Progress Report

I'm completing the project myself as a one person group, so everything written is mine.

1. Project Overview

Creating a web-based Air Ticket Reservation system using relational databases from part 2.

2. Work done so far

- ER diagram for Air Ticket Reservation system
- Relational schema diagram based on ER diagram
- Create Table statements
- Insert statements
- query tests
- Created project folder with PHP file structure for part 3
- set up initial PHP files for public, customer, and airline staff components
- More specifically implemented:
 - db.php
 - index.php
 - login_customer.php
 - login_auth_customer.php
 - logout.php
 - customer_home.php
 - style.css (basic for now)

3. Remaining tasks

- finish db.php
- implement customer login and customer session handling
- implement airline staff login and staff session handling
- implement public flight search
- implement customer pages for future flights, past flights, ticket purchases, and ratings
- implement staff pages for viewing flights, added airplanes, creating flights, changing flight status, and viewing customers
- test edge cases
